

# Introduction of the meeting

GWADW2022

Kentaro Somiya (Tokyo Tech)

# Overview of this meeting

This is the second online GWADW meeting. We made some changes from last year to further improve the efficiency of the meeting.

One of the major changes is to reduce the number of oral sessions. In this meeting, **we focus on the discussions about the low frequency sensitivity improvement** of the ground-based GW detectors.

Another difference from last year is to have more poster sessions. We believe **GatherTown poster sessions can be nearly as interactive** as the in-person meeting. Please come and join the poster session.

Note that **GatherTown does not work properly with Safari** for Mac users. It is recommended to use Google Chrome or Firefox.

# Other updates

- There is no pre-recording this year.
- Sessions will be recorded. The video information will be provided in the videoroom in GatherTown.
- Slides will be available through the link in the timetable.
- The private area has been removed in the poster session so that people walking by can slightly hear what other people are talking.
- There will be a social event (mini-game) at around the end of the poster session II.

# Some more notes

- There are 2 ZOOM URLs. One for the afternoon sessions and the other for the evening sessions (JST). Password is the same.
- GatherTown is password free. You can enter just by clicking the URL.

Any questions? If not, Enjoy the Meeting!
